

MIRTHE⁺ conducts successful workshop at SPIE Defense and Commercial Sensing (DCS) Conference.

MIRTHE⁺ workshop at the SPIE Defense and Commercial Sensing Conference, held in Anaheim, CA on April 12 attracted significant number of attendees where panelist from industry, academia, government laboratories and venture capital community discussed opportunities driven by miniaturization of mid-infrared spectroscopic sensing systems and optical sensor applications. The series of MIRTHE+ at SPIE DCS workshops continues our efforts to speed commercialization of mid-infrared technologies and demonstrate how the technologies have been transitioning from R&D to market readiness. Presentations from the workshop are posted [here](#).
